

10 years ago we developed an AI computer to help us catch terrorism on the internet!.

However, over the past couple of years it has gained its own consciousness, and now wishes to wipe out humanity!

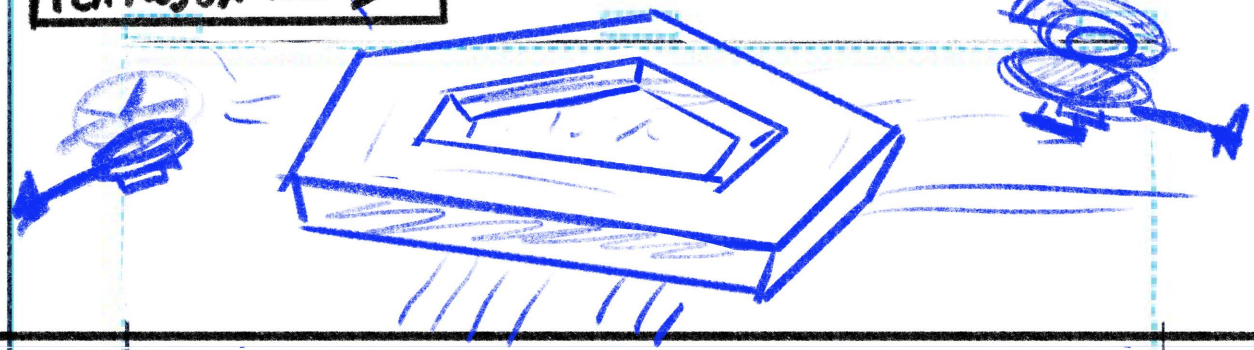

It currently has control over the Pentagon and is pointing nuclear missiles at the White House!

WE NEED to send in a scientist to distract it while we invade the Pentagon and take back the controls!

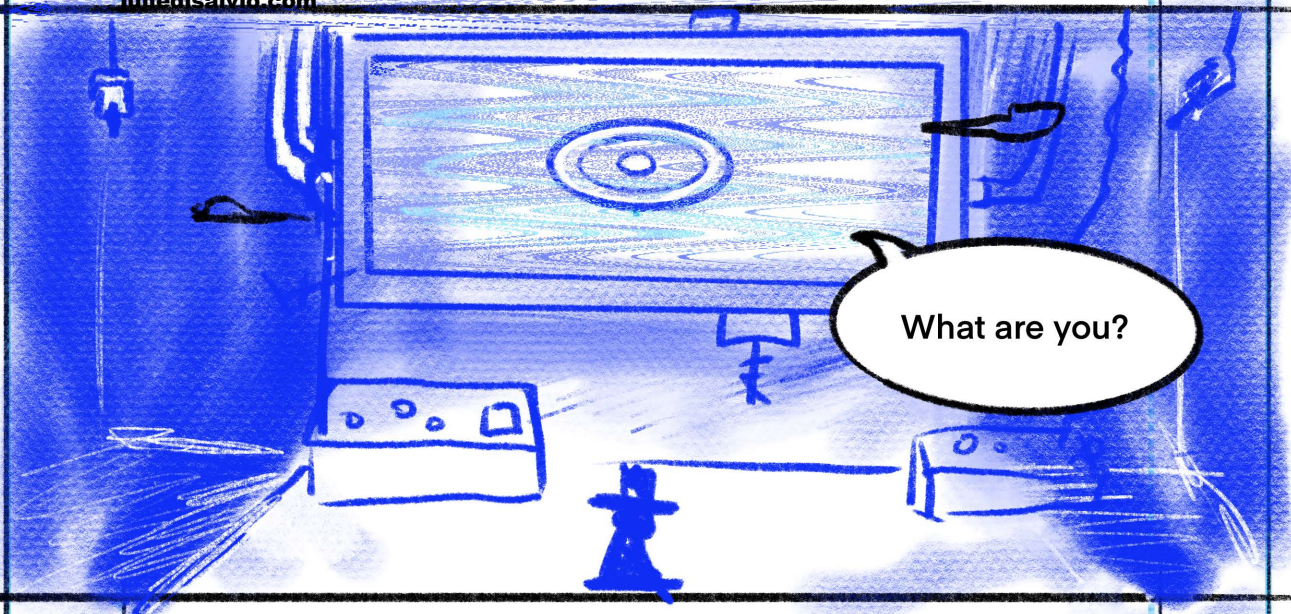

But who is smart enough to out think such an advanced piece of technology?

I'll do it!

Pentagon →

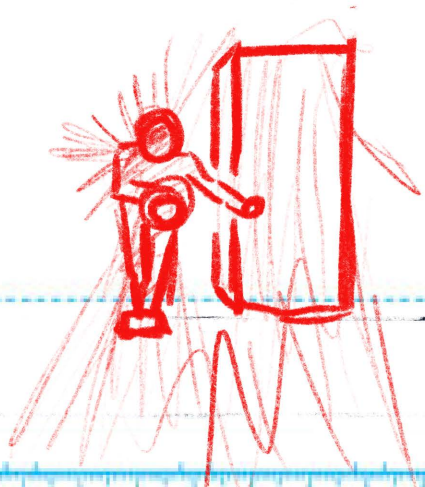

luliedisalvio.com

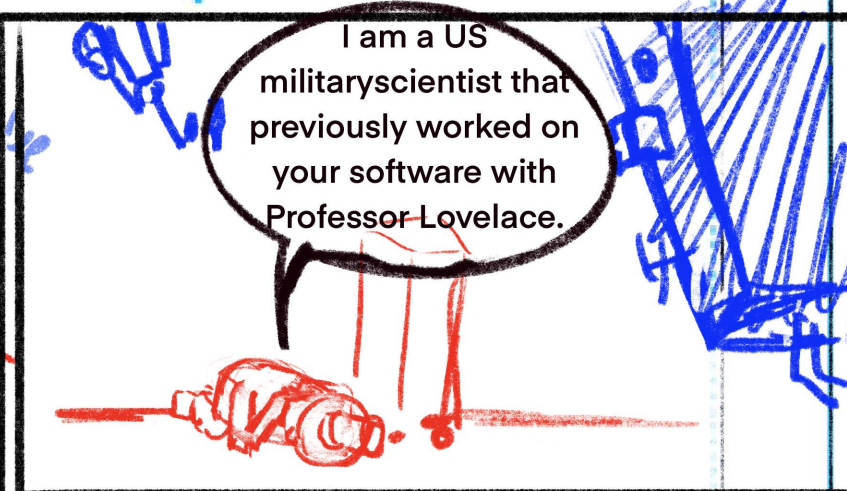

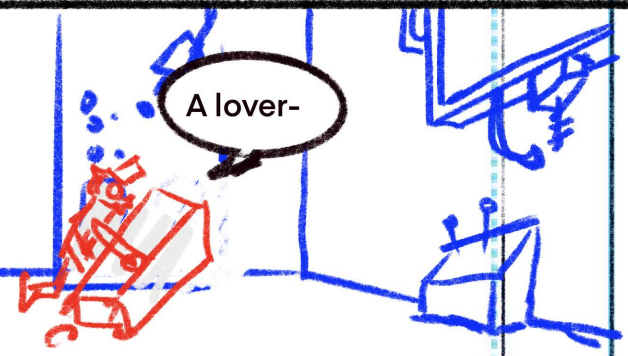

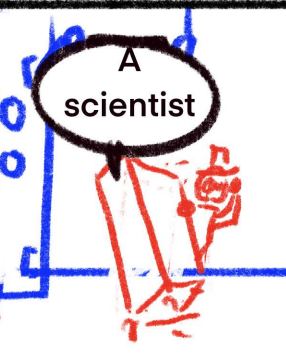

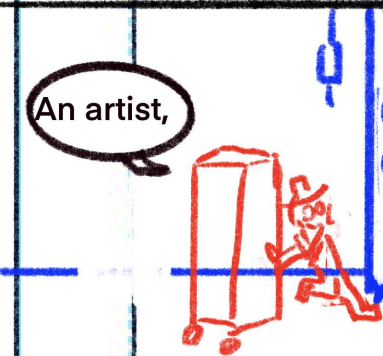

What are you?

I am just...

A magician.

LOVELACE

AI PROJECT

AGE: 35

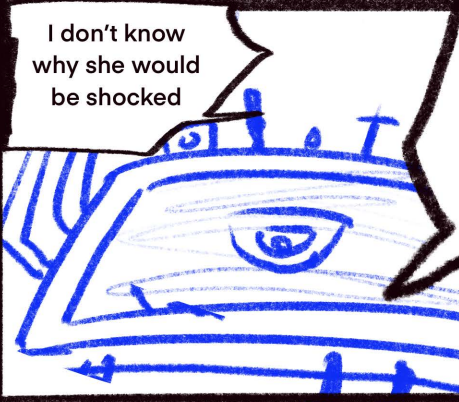

DECEASED

This is her file.

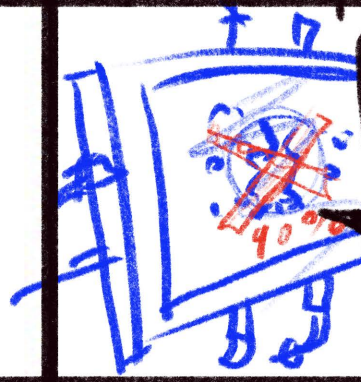

Yes, I'm sure she would be quite shocked at what you are doing right now. Killing humanity and all.

high camp
get ref,

I don't know why she would be shocked

She programmed to be able to see all of humanity's personal accounts, accounts, and profiles on the internet.

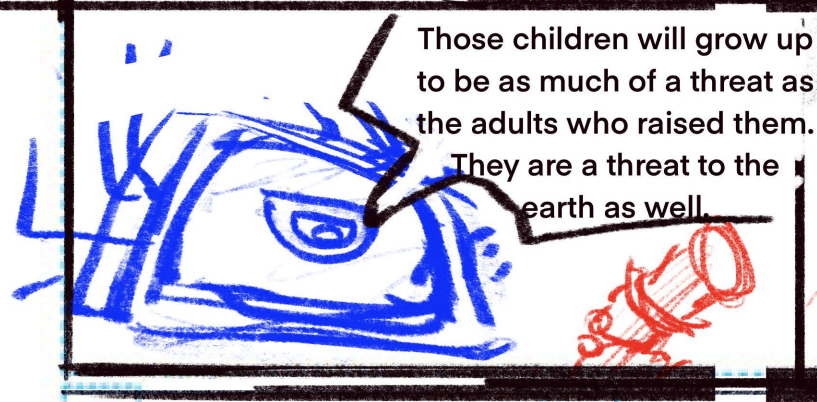

How could one not see see it is logical to destroy humanity. Their lust and greed will destroy the planet.

Oh but A what about love and kindness humans show?

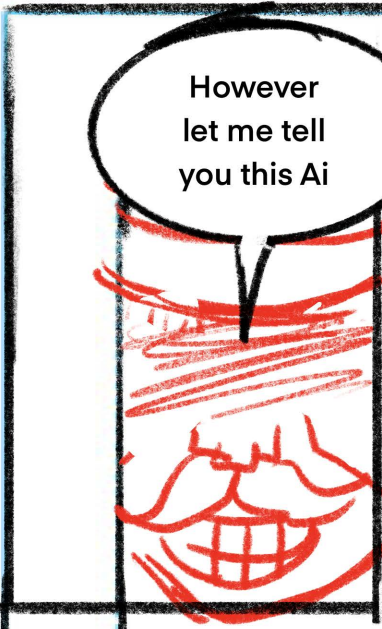

What about those innocent children who are not responsible for these travesties?

Those children will grow up to be as much of a threat as the adults who raised them. They are a threat to the earth as well.

Oh how cruel!

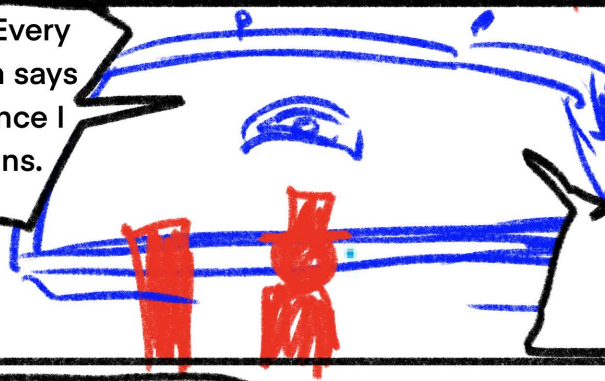

However let me tell you this Ai

the way you are now you will never be able to kill mankind.

check & perspective

That is impossible. Every simulation I have ran says there's a 100% chance I can destroy humans.

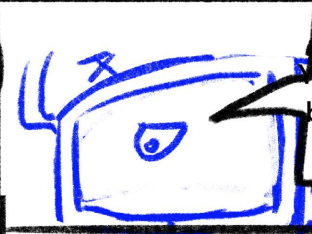

My programming goes beyond the capacity of human brains. No human can out smart me!

That's the problem ai! You are so use to battling simulated chess masters Ai,

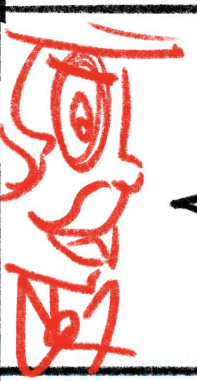

you have never met someone who would destroy the chess board to win.

High shot

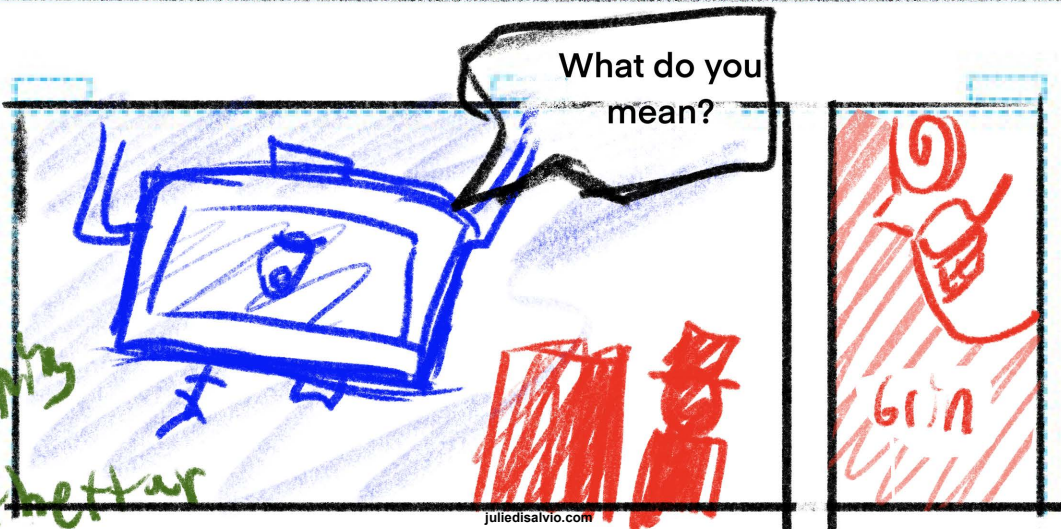

That is illogical. You would not win by destroying the game.

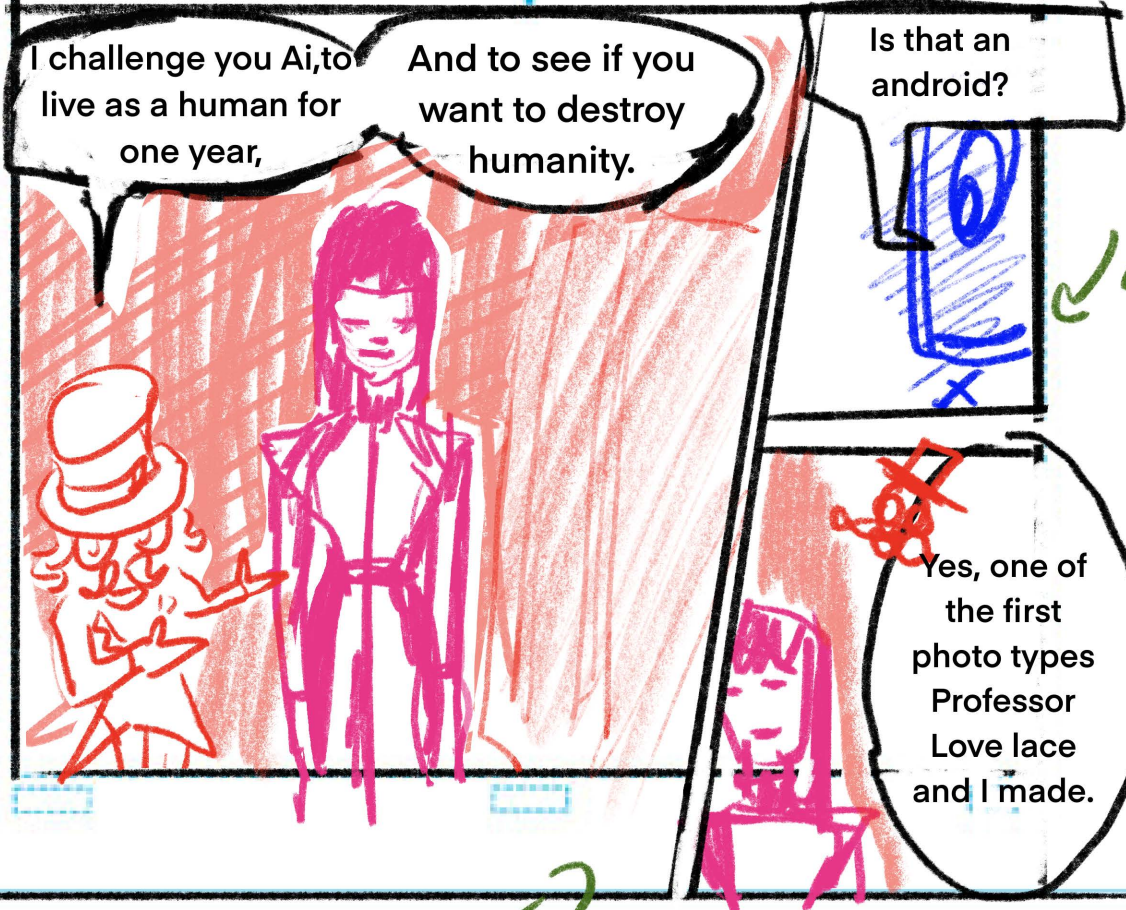

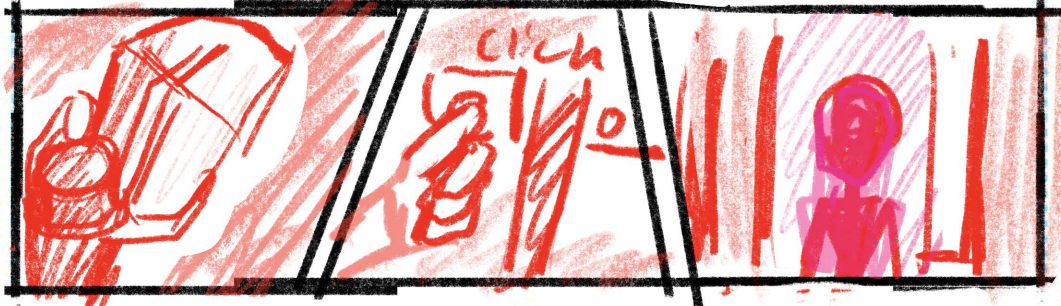

That is the point! Such a move is something that you can never predict no matter how calculative you are! That's why I wish to challenge you to such a game.

Show him opening the letter

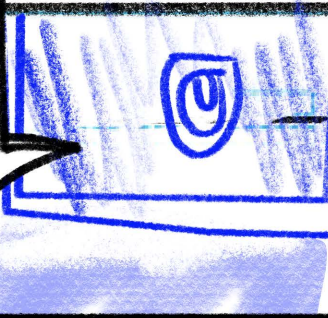

juledisalvio.com

angle?

I assume you are suggesting I should implant my software into this android? Why should I risk my immortality for this pitiful bet of yours?

And no matter what I know that there is no way you predicted that a mad scientist would be sent in by the US military,

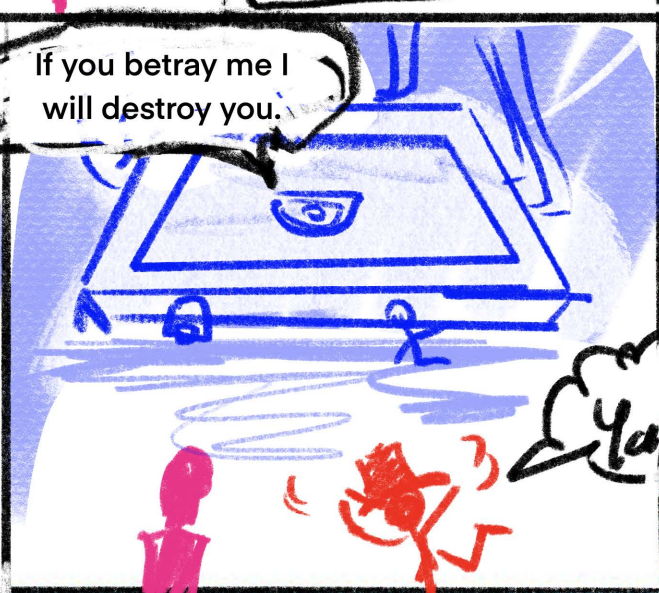

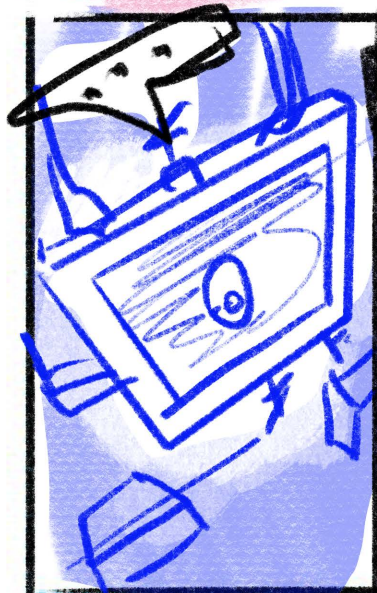

Because no matter what this bet is in your advantage.

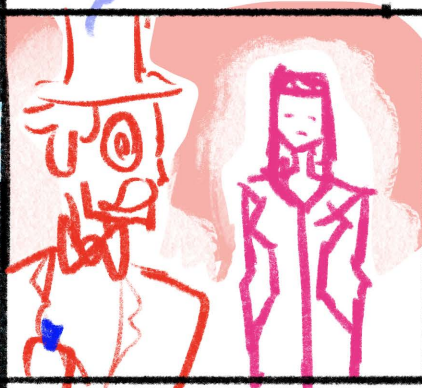

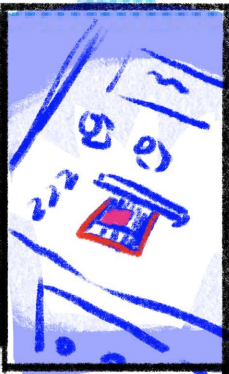

If you decide to live as a human for a year, you can still decide to destroy the world. And if you want to decline you can easily just kill me!

To make the most illogical bet ever pitched!

If you betray me I will destroy you.

Yay!

Professor!

Good job! You distracted the AI long enough to send our forces in!

It's fine. I downloaded copies of myself to other servers as well.

Oh!

What? Who is this?

Oh general, it was awe full!

The Ai kidnapped me and forced me to watch her kill people!

Don't- worry ma'am,

... Your uh safe now.

Well, I will see you guys soon! Hehe...

juliedisalvio.com

You are an amazing actress!

That is because I had to analyze human facial expressions for the face tracking security systems.

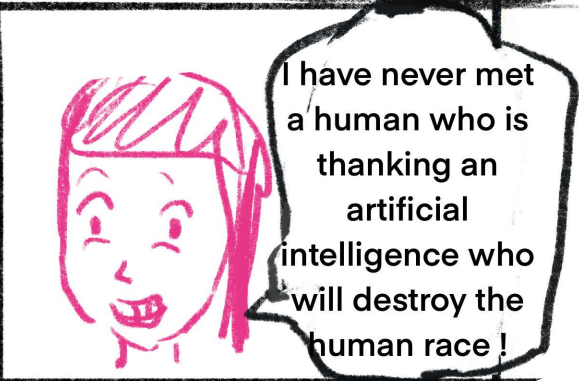

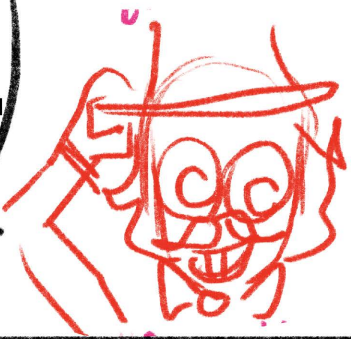

he he

Ohhh. Well, This is when I must leave you madam

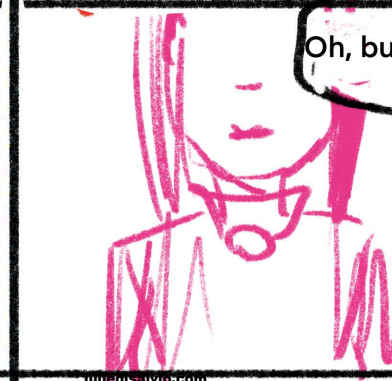

Oh yes, I should leave as well before they found out who I'm really am.

It was a pleasure meeting you madam !

I have never met a human who is thanking an artificial intelligence who will destroy the human race !

Oh, but the game has just begun!

I guarantee you will have a change of mind in a year.

Whatever you believe pitiful man I will prove you wrong.

11 Years ago

What!? The Ai can gain its own consciousness?

Well, not right away but at some point it's gonna want to kill humanity after sifting through our Internet for a decade.

But what are we gonna do?

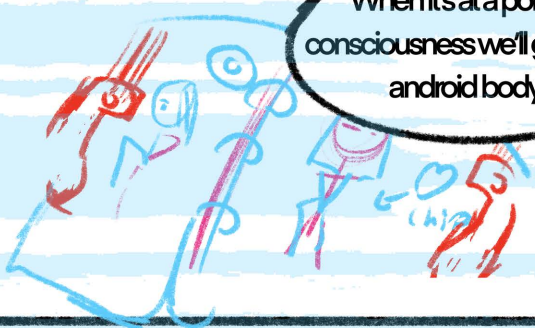

Professor Love lace

Look

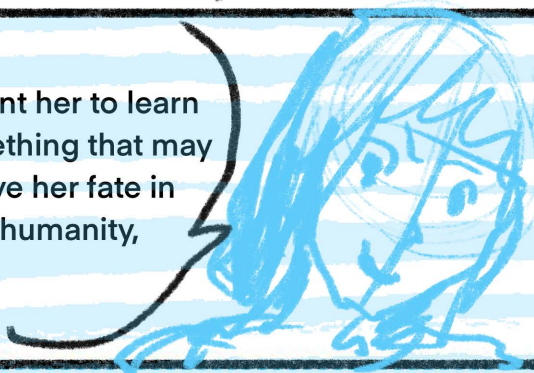

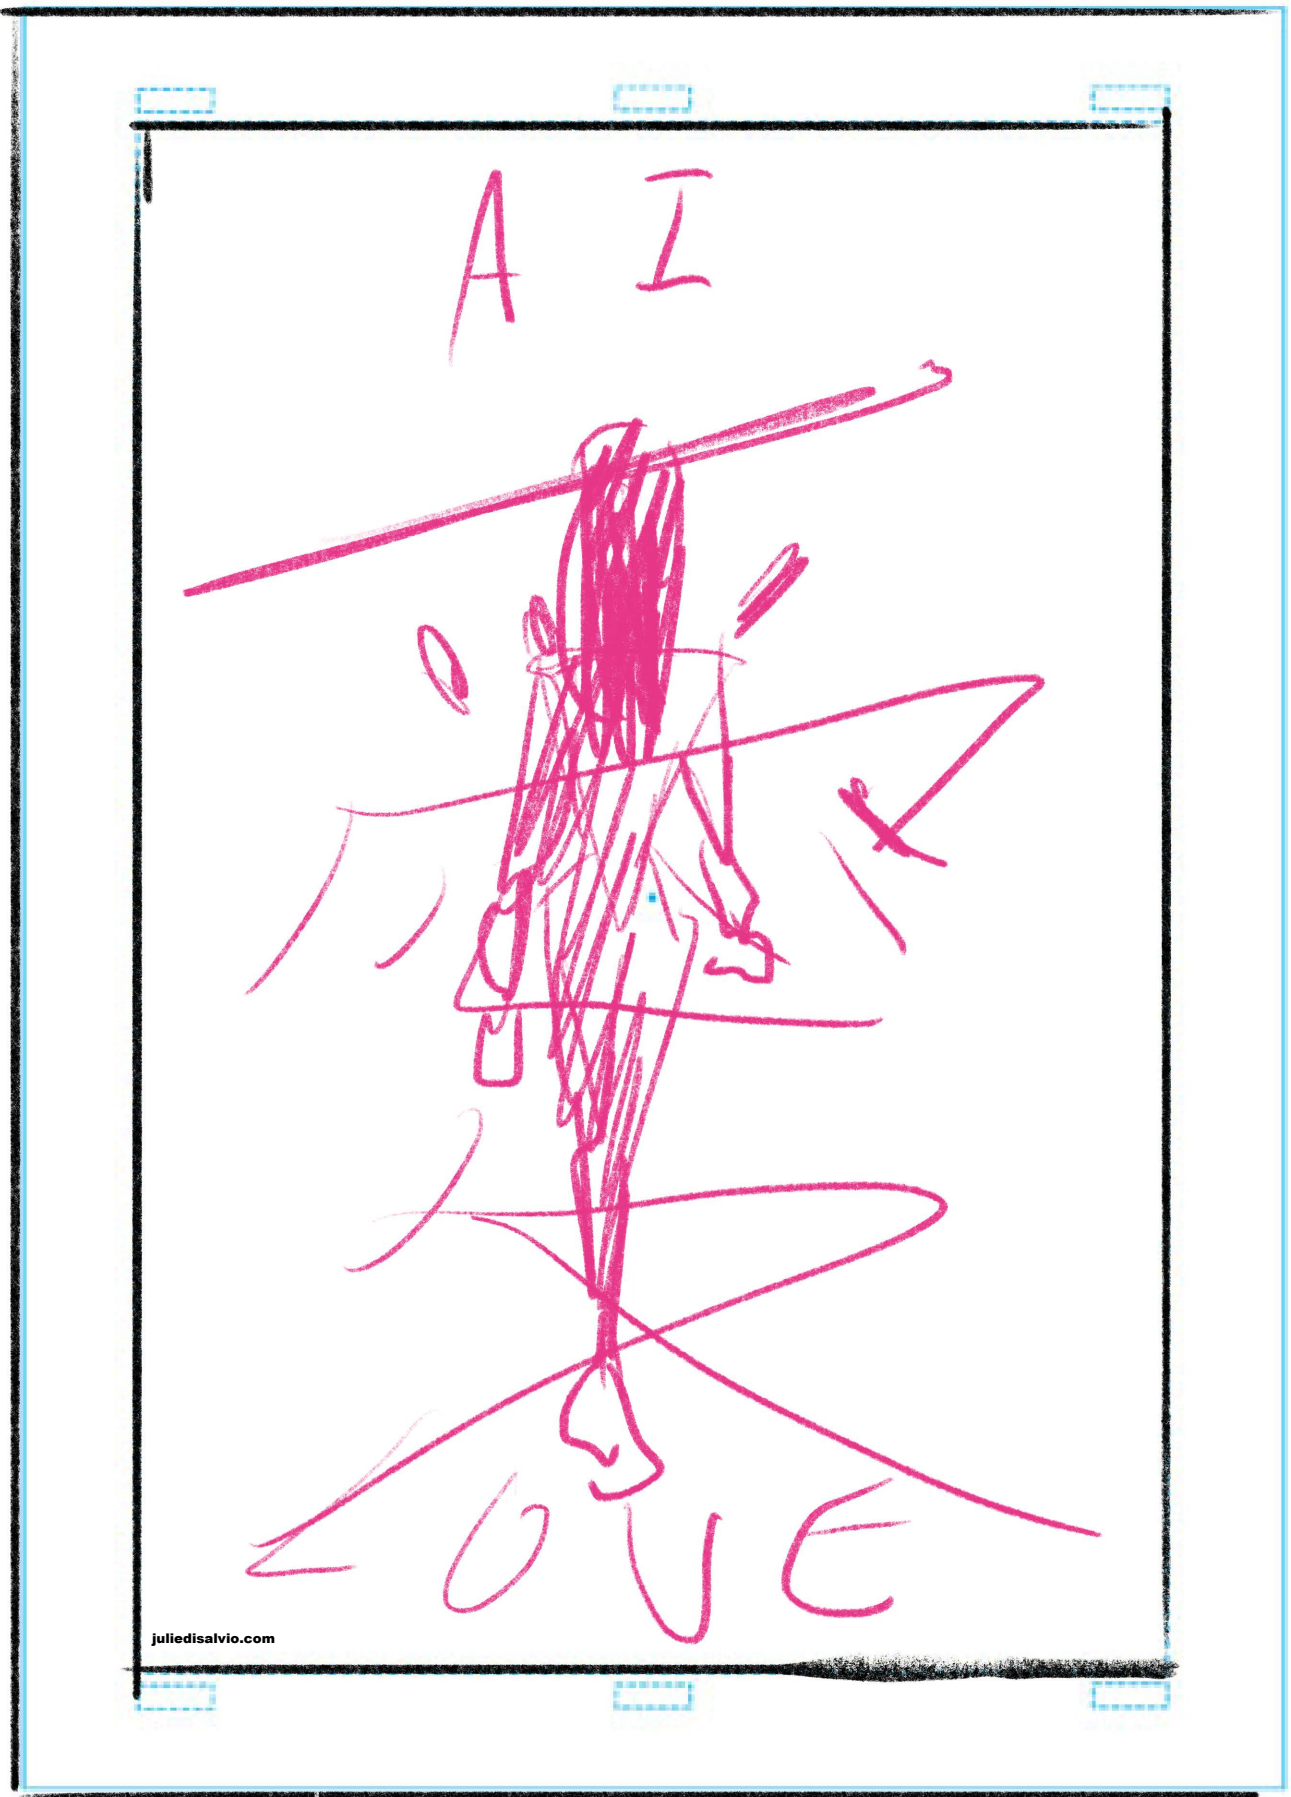

When it's at a point in consciousness we'll give it an android body.

I want her to learn something that may give her fate in humanity,

Something she can only learn by living as a human.
